D-Link

Quick Instruction Guide for IP camera

1. Network Connection

Connect the IPC in your network as per the network topology map reference below.

Figure 1 Network connection Topoloy

2. Accessing the Camera

By default, the IP address of the IP camera is 192.168.1.10. Also, by default the DHCP setting is enabled on the IP camera's Lan setup and if connected to a router it will receive the IP address in the range of router's IP address.

3. How to use D-Link IP Search Tool to modify network setting

• Step 1: Download D-Link IP Search Tool & save it on Desktop using below link.

Link: https://cctv.dlink.co.in/uploads/IP%20Search%20Tool_v6.4.65.1.exe

• Step 2: Click the program shortcut on the desktop, to start running the D-Link IP Search Tool.

- Step 3: Click on 'search' to detect all IP cameras connected in the LAN.
- **Step 4:** Select the IP camera whose parameters you want to change and right click to modify network setting.
